

Discrete Mathematics Quiz 1

2025-4-21

Name _____ Student Number _____ 序号 _____

by 5dbwat4

1. (35%) Determine whether the following statements are true or false.
(5 points for a correct answer, 0 points for a blank answer, -2 points for an incorrect answer)
 - a) If x is not occurring in A , then $\exists x(P(x) \rightarrow A) \equiv \forall xP(x) \rightarrow A$. ()
 - b) If A , B , and C are sets, then $A - (B \cap C) = (A - B) \cup (A - C)$. ()
 - c) If n is integer, then $n = \left\lfloor \frac{n}{2} \right\rfloor + \left\lfloor \frac{n}{2} \right\rfloor$. ()
 - d) Suppose $P(x, y)$ is a predicate and the universe for the variables x and y is $\{1, 2, 3, 4\}$. Suppose $P(1, 3)$, $P(2, 1)$, $P(2, 4)$, $P(3, 2)$, $P(3, 4)$, $P(4, 1)$, $P(4, 4)$ are true, and $P(x, y)$ is false otherwise. Then the statement $\forall y \exists x ((x \leq y) \wedge P(x, y))$ is true. ()
 - e) $n^{0.01}$ is $O(\log_{1.01} n)^{99999}$. ()
 - f) The set of positive real numbers less than 1 with decimal representations consisting only of 0s and 1s is countable. ()
 - g) $2025^{2026} \equiv 1 \pmod{2027}$. ()
2. (12%) Write a proposition equivalent to $p \oplus q$,
 - a) using only p , q , \neg , and the connective \wedge .
 - b) using only p , q , and the connective $|$. (“ $|$ ” represents NAND 与非.)
3. (9%) Find the full conjunctive normal form of $(p \oplus q) \vee r$.
4. (8%) Build all the functions from $A = \{1, 2\}$ to $B = \{a, b\}$ and point out which is bijection, and which is surjection.
5. (9%) If all the positive integers that are relatively prime with 77 are arranged into a strictly increasing sequence, find the 600th term of this sequence.
6. (9%) Use the construction in the proof of the Chinese remainder theorem to find all solutions to the system of congruences $x \equiv 1 \pmod{3}$, $x \equiv 2 \pmod{5}$, and $x \equiv 3 \pmod{8}$.
7. (9%) Prove that the distributive law $A_1 \cup (A_2 \cap \cdots \cap A_n) = (A_1 \cup A_2) \cap \cdots \cap (A_1 \cup A_n)$ is true for all $n > 2$.
8. (9%) Prove that every positive integer ($n > 2$) can be expressed as the sum of different Fibonacci numbers.
